

Amazon ML Summer School 2026 - SOP

Submission

I started with building a strong base in programming, data structures and problem solving which gradually led me to explore machine learning and data analytics. I have experience in data analysis, predictive modelling and web development projects. I worked on one of the most exciting projects, E-Commerce Conversion Prediction system, in which I used real world customer behaviour data to predict whether a visitor will complete a purchase. Through this project, I have been exposed to the full machine learning knowledge, from data preprocessing, feature engineering, model training, evaluation and performance tuning using metrics such as f1-score. This experience have taught me about,how even small improvements in data quality and feature selection could have a huge difference in the performance of the model.

I recently completed the Google Cloud Data Analytics Certificate where I got exposure and experience with data collection, cleaning, transformation, visualization, SQL, and analytical thinking. It really encourage how I work with datasets and helped me appreciate just how much value lies in pulling the right insights from raw data.

I know I still have a lot to learn. I want to go deeper into advanced machine learning algorithms, model interpretability, optimization techniques, deep learning architectures, and the maths that actually makes modern AI work.

I am excited for Machine Learning Summer School as it provide the opportunity to learn directly from experts, collaborate with motivated peers , and gain exposure to cutting-edge research and industry practices. I believe structured mentorship and interaction with experienced researchers will help bridge the gap between academic learning and real-world AI applications.

I consider myself a curious learner who is eager to explore new technologies and applying them to solve practical problems. If I encounter a concept I do not fully understand, I actively seek resources, experiment with implementations, and learn through hands-on practice from . This mindset has enabled me to continuously expand my technical skills despite coming from a relatively modest starting point.

I see Machine Learning Summer School as an opportunity not only to expand my experience in technical foundation in AI/ML but also to become part of a community of learners who are passionate about innovation. I am confident that my enthusiasm, willingness to learn, and commitment to growth will allow me to contribute meaningfully to the program while making the most of everything it has to offer.

For me, Machine Learning Summer School is not just about acquiring new skills; it is about becoming part of a community that inspires growth, encourages innovation. I am excited about the possibility of being a part of this experience and using the knowledge gained to continue building impactful solutions in the field of AI ML.
